

RBTAW 1000/1500 Easistow 2

The Ross & Bonnyman Easistow 2 is a brand new folding underfloor lift that has been designed, engineered and built in Great Britain. The Easistow 2 has the added advantage of having a two lift ram system, which provides much greater stability than single cylinder systems.

The platforms have been designed to remove the need for welded sections. The lift frame is finished in black to a thickness of 200 microns. If required the lift can be supplied with roll stops, flashing lights and foot controls.

Standard Features

- 1000 or 1500Kg capacities
- Aluminium platforms
- Black painted lift frame
- 2 lifting cylinders with chromed over stainless ram rods
- External control
- Wanderlead
- Three-piece under-run bar
